NEXT MEETING

Paul Stessel

DATE: Tuesday, October 13, 2015
TIME: 7:30 P.M.
PLACE: Freeport Memorial Library
144 W. Merrick Rd. (at S. Ocean Ave.)
SPEAKER: Dennis Fleury with Live Animals
TOPIC: Tackapausha Wildlife

This month’s program will be presented by Dennis Fleury, the site director at Nassau County's Tackapausha Museum and Preserve, located in Seaford. The South Shore Audubon Society has had a long and rewarding relationship with Tackapausha.

Dennis is a font of first-hand knowledge about our local species, and he will be bringing representative live birds (including an owl) and other animals from the museum to explain their life-histories. He will tell the stories of why they have to be kept in captivity and will also talk about upcoming Tackapausha programs. He is a state-licensed wildlife rehabilitator who has been rescuing and advocating for animals since he was a youth. His programs are always lively, informative, and extremely enjoyable.

PARENTS PLEASE NOTE: WE WELCOME CHILDREN! In order to make it possible to bring your children, as this is a school night, we are reversing the general meeting’s order this month. We will begin the presentation promptly at 7:30, break for refreshments at about 8:15, and have our committee reports at about 8:30. Dennis is one of the most outstanding wildlife educators on Long Island, and can answer almost any question your child may have about the animals he brings and about our wildlife in general. Join us!

Pre-Meeting Book Discussion. Arrive a half-hour early to participate in a discussion led by R. U. Abyrdar II (aka Paul Stessel) of the book that he and Sy Schiff reviewed in the previous Skimmer. This meeting’s book is Tales of a Low-Rent Birder by Pete Dunne.

Parking Lots. In addition to the parking lot adjacent to the library, there’s a lightly used, well-lit, and fairly close municipal lot on the east side of S. Ocean Ave., on the near (south) side of the gas station that borders Sunrise Highway.

IN ORDER TO MINIMIZE WASTE, PLEASE
BRING COFFEE MUGS TO OUR MEETINGS.

SSAS Mission Statement — The mission of South Shore Audubon Society is to promote environmental education; conduct research pertaining to local bird populations, wildlife, and habitat; and preserve and restore our environment, through responsible activism, for the benefit of both people and wildlife.

PRESIDENT’S MESSAGE
The Scholarship Programs of the South Shore Audubon Society

Betty Borowsky

Environmental education is integral to the mission of SSAS. It is an important component of our public programs, our field trips, and many of our environmental advocacy efforts. In addition to these educational activities, we conduct a scholarship program that supports or provides environmental education to college, high school, and grammar school students.

Each year, thanks to the generosity of Evelyn Bishop, who funds our college scholarship program in memory of her late husband Jerry, we award scholarships of at least $750 to two or three students taking courses for a career in some aspect of environmental conservation. We also award $250, from our own funds, to three or four high school seniors who have demonstrated a commitment to the environment. (The college program is coordinated by Betsy Gulotta, and the high school program by Joe Landesberg; this year’s recipients were listed in September’s Skimmer.) In addition, each summer we send between 5 and 13 financially disadvantaged youngsters in our catchment area to attend a week of the environmental...
program at Theodore Roosevelt Sanctuary and Audubon Center (TRSAC).

We send applications for the high school and college scholarships to local high schools and colleges every year (look for announcements in the Skimmer along about March), but we rely on the schools and their dedicated teachers to help us identify eligible grammar school children.

In the beginning of our grammar school scholarship program we selected a different school district to work with each year, but for the past three years we have offered the scholarships to children who have completed the “For The Birds” (FTB) program in their grammar school. The FTB program is funded by a grant to TRSAC, and brings environmental educators into the classroom about once a week through the school year. At the end of the year, the children are invited to write a brief essay describing why they would like to attend the summer program at TRSAC. At the end of the summer program, the children prepare an essay describing their experiences at camp — what they liked and what they didn’t like. (So far, nobody hasn’t liked it!)

1999, our first year, was the most challenging for us, as we were working out all the administrative details, and making sure that all the approvals and other paperwork was completed properly. And there was a lot of it. In fact, we had everything we needed for only three children by the time the program was due to begin. And then, to our disappointment, one child changed his mind, and another had to travel out of the country.

So there we were on the first day of the program: the bus driver, three volunteer chaperones from South Shore, a full-sized school bus — and one little girl. She was, however, entirely unfazed by being the only camper, surrounded by strange adults, and attended every day of the program. In addition, I was deeply touched by her bringing a notebook every day so she could write down all her new experiences. Naturally we all fell in love with her, and seeing how much she enjoyed the TRSAC program, and how eager she was to learn more about nature, motivated us to provide this experience to as many other children as we could. In fact, to date, we have sent 190 children to the summer program at TRSAC.

Our objective is to instill a love of nature in as many children as possible. We believe it’s really not hard to do that — all it takes is a way to bring the children into nature, and the rest will follow naturally. Many of these children have never taken a walk through the woods, or passed a seine net through the water, or really looked at a bird. They haven’t slept in a tent, or sat around a campfire. We feel that the love of nature is one of the greatest gifts we can give the children, as it will enrich their lives forever.

This year’s program sent ten children to TRSAC. I would like to thank all of the people who work on this scholarship program every year. This year, special thanks go to Mrs. Beasley, of the Washington Rose School in Roosevelt, and to Rebecca Oyer and Diana Ngai, at TRSAC. But I would also like to acknowledge the help of all the members of SSAS who have volunteered in this program over the years — the chaperones, the people who contacted students’ families, and the folks who assisted at TRSAC itself. And thank you to all our members for their encouragement and support over the years. We could not conduct these programs without you.

PROCESSIONAL

I stand lookout for them early autumn,
raptors massing out of Canada, New England,
advancing down Long Island marshes, swales, ocean beaches,
foraging as they come:
Merlins, dark explosions of close-ground headlong flight,
Kestrels helicoptering above grasshoppers, rodents.
Northern Harriers, back and forth patrolling over dunes,
Cooper’s, Sharp-shins in flap-flap-glide,
always I wait for the rare one, the Peregrine Falcon,
catapulting out of the horizon into flock of blue-backed Tree Swallows,
Monarch of this pilgrimage of predation

Maxwell Corydon Wheat, Jr.

THERMALLING

I lie on Whitehorse Mountain
among goldenrods humming with bees.
Circle of oaks murmurs
sayings of September.
I dwell on kettles of hawks

This is a Broadwing Day
over mountains by the Hudson,
hundreds of Broadwings tiering up from the north ridge
like smoke signals from the Iroquois

Tip of one
pirovet under another’s primaries,
for a moment . . . mobiles,
then sliding off they are curves,
raptors circling
under arcs of more raptors
all ascending, sweeping down ridge
with motions of earth and planets around the sun

Maxwell Corydon Wheat, Jr.
Poet-In Residence
South Shore Audubon Society
Freeport, New York
Warblers, Warblers, Warblers

Joe Giupp

Mid-May last spring found my wife and I on the shore of Lake Erie, a few miles east of Toledo, Ohio, approximately 600 miles by car from home. We were encouraged, even nudged a bit, to make the trip as early as last fall by Steve Schellenger, a past SSAS field trips chair and birding friend who many of you might know from the SSAS Sunday walks. The attraction there is a concentration of migratory birds that spend a few days in the area, feeding before continuing north across Lake Erie on their way to their breeding grounds. The number of birds, coupled with a birding festival by the name of “Biggest Week in American Birding,” organized by the Black Swamp Bird Observatory, draws birders by the hundreds to the area during that week of the year. The migratory spectacle has drawn Steve there for the last five years and by the time our stay ended we knew why any birder, including ourselves, could be drawn back to it again and again during future spring migrations.

The physical area of concentration covers five extensive pieces of property, dedicated all or in part to wildlife conservation. First and foremost is Magee Marsh and its six-tenths of a mile long boardwalk and other trails, which is the focal point of songbird activity and a place where we spent time each day. Abutting the marsh, but a car ride away to gain access, is the Ottawa National Wildlife Refuge, which has an auto tour road that we rode and a number of foot trails that we never got the chance to explore. Nearby is the Metzger Marsh Wildlife Area, where access to the marsh is mainly from roadside pullouts, but it also has a wooded area with a trail at the road’s terminus by the shore of Lake Erie and a footpath along a dike that separates the lake from the mainland. In addition to all that, there is a series of isolated Metroparks, some of significant size, that in part provide habitat for birds and other wildlife. Some have what is called “A Window on Wildlife,” which is a large window that looks out on a landscape that includes bird feeders and is designed to attract birds and other wildlife. We took advantage of one of those locations for a while on a somewhat rainy morning.

Add to those locations Maumee Bay State Park, where the festival headquarters was located, and its open spaces and nature trail, and there were more than enough areas to explore in the five days we were there. In total there is a significant amount of open space not only for migratory birds but also for resident birds and other wildlife. It is a special area of conservation.

Our observations there are hard to define, not because there were not any great ones but because there were so many of them. Birds were everywhere on our first morning at Magee Marsh. The first species to impress me was a Chestnut-sided Warbler that was close enough that binoculars were not really needed. The bird hopped from branch to branch, hopped over my head, and was never far from me. What made the observation more impressive was that eight or ten, maybe a few more, other people gathered around me to also observe and the bird continued its activities, showing absolutely no awareness of the crowd watching it.

A short time and a few birds later, I spent some time with a Bay-breasted Warbler nearly as close and just as cooperative. As we moved on, I spotted another Bay-breasted Warbler, and another and another. There were lesser numbers of other species there also but Bay-breasted Warblers seemed to be everywhere. Another day it was Tennessee Warblers that seemed to dominate; another day it was Cape May Warblers; and on another day not quite as conspicuous were Blackpoll Warblers (pictured). All the while, other species of warblers and other migrant species were scattered throughout the vegetation, being observed at times by a significant number of people. My list of warblers approached thirty after the first two days.

It seemed that one good observation followed another, not only at Magee Marsh but at other locations as well. Five Bald Eagles, mature and immature, were observed on a distant leafless tree. A scope was needed to determine that one of the birds was really a Bald Eagle; it appeared so thin. It was and I did not think its chances of survival were very good. A scope was also needed to observe a distant Hudsonian Godwit (pictured), a fairly rare bird in the area that was resting and then feeding before heading north. One evening, Steve and I went at dusk to try and find a few Common Nighthawks that he had seen previously but we had to be satisfied with watching an Eastern Screech-Owl leave its nest box, pounce on some prey, and return to the nest box with it. The owl did it a second time, flying farther from the box. A third time it flew quite a distance away and we did not wait for it to return. The next evening we got two Common Nighthawks and the following day we had one resting on a limb above us as we tried to find an elusive Connecticut Warbler.

Great observations continued throughout our stay but what impressed me most was the number of birds of a particular individual species of warbler as well as the number of individual species that were there most of the time. Frequently the observations were very close. Most species were present for a number of days. We were literally standing in the midst of the spring migration. It was warblers, warblers, warblers everywhere. Thanks for convincing us to make the trip Steve!

Addendum: By chance alone, the current Audubon magazine has an article in it about this spring phenomenon, titled “Welcome to Warblerstock.”
OFFSHORE WIND ENERGY SITING GRANT UPDATE
FROM YOUR CONSERVATION CHAIR
Jim Brown

I reported in the March 2015 edition of the *Skimmer* that the South Shore Audubon Society, in collaboration with New York City Audubon, had received a $10,000 grant from the Moore Charitable Foundation and National Audubon. The purpose of the grant is to study the possible impacts on birds of a proposed Long Island–New York City Offshore Wind Project. The wind farm is to be located approximately 14 nautical miles due south of Nassau County, and if ever built will be the largest offshore wind project in the country. Seventy turbines at a minimum are planned, with the possibility of increasing that number to 140. The wind turbines are large — they are approximately 278 feet tall with a blade span diameter of 360 feet. Seventy turbines, operating at 40% capacity, would provide enough electricity for about 112,000 homes.

I am happy to report that the work on the grant is proceeding according to schedule. We have contracted a consultant, Wing Goodale, to create a report that will analyze this wind farm from the point of view of its possible impact on various species of birds and to identify any data gaps that might have to be filled in order to have a sound basis on whether or not the construction of this wind facility should be approved. Mr. Goodale is Deputy Director of the Biodiversity Research Institute located in Portland, Maine, and has extensive knowledge of the issues surrounding birds and wind energy facilities.

Over the summer, I and my colleague at NYC Audubon, Dr. Susan Elbin, studied published academic articles recommended by Mr. Goodale relating to the subject of the impact of wind turbines on birds. We shared our comments with him on these documents and Mr. Goodale has recently submitted to us his draft, interim report — “Offshore Wind Energy Development and Birds in New York: Managing risk and identifying data gaps.” This report is currently being reviewed by board members of SSAS and NYC Audubon. We will soon present questions and comments to our consultant and a final report will be issued later in the year. The final report will be disseminated widely through a PowerPoint presentation and the publication of a brochure. Both our local Audubon chapters will also publicize the findings on our Web sites and Facebook pages.

Global warming is a crucial issue for our times and is a direct threat to life on earth as we currently know it. National Audubon is currently studying the probable negative impacts of global warming on many bird species and has already come to the conclusion that over half of the avian species in North America are “climate endangered” or “climate threatened,” i.e., the 126 species that are endangered are projected to lose more than 50% of their current range by 2050, and 188 other species that are threatened will lose more than 50% of their current range by 2080. National Audubon believes that the Common Loon, the state bird of Minnesota, may in fact disappear from that state as its summer range moves north. It is possible that Baird’s Sparrow may become extinct due to climate change. The Ruffed Grouse (pictured), Pennsylvania’s official state bird, as both its summer and winter ranges migrate north, may disappear from the northeastern U.S. entirely.

The Continental Shelf of the United States, including the waters of the New York Bight, offer great opportunities to develop wind energy. If we are to solve the severe planetary crisis created by global warming and climate change, we must drastically and quickly limit the production of greenhouse gases produced by fossil fuels and seek alternative energy sources, such as wind power. But wind power facilities — including offshore wind turbines — must be properly sited, to limit any negative impacts on birds (and other wildlife). We hope that our grant study will contribute to available knowledge that will lead to informed decisions on the siting and building of offshore wind facilities.

SSAS Post Office Statement — South Shore *Skimmer* is published monthly from September through December and February through May by South Shore Audubon Society, P.O. Box 31, Freeport, N.Y. 11520-0031.

✈️ BIRD WALKS ✈️
Joe Landesberg

Beginning in October, all walks will start a half-hour earlier, at 9 A.M.; no walk if it rains. Call me at 467-9498 in case of questionable conditions or for other info. Directions and lists of what we’ve seen are at ssaudubon.org.

- Sep. 27 Alley Pond Park (76th Ave. parking lot; our last 9:30 A.M. walk)
- Oct. 4 Jones Beach West End #2, N.E. corner
- Oct. 11 *Columbus Day Weekend* — No Walk
- Oct. 18 Hempstead Lake State Park (Southern State Parkway Exit 18 south, Field #3)
- Oct. 25 Alley Pond Park (76th Ave. parking lot)
- Nov. 1 Mill Pond Park (Wantagh/Bellmore, north side of Merrick Rd.)
- Nov. 8 Massapequa Preserve (LIRR N.E. lot)

Volunteers for Wildlife (516) 674-0982

#### October 2015

General Meeting, Freeport Memorial Library
“Tackapausha Wildlife” with live animals
Tuesday, Oct. 13, 7:30 p.m.

Bird Walks, Sundays, 9:00 a.m.
  - Oct. 4, 18, 25

#### November 2015

- NYS Audubon Council Fall Meeting
  - Windham, NY, Nov. 6–8
- General Meeting, Freeport Memorial Library
  - Tuesday, Nov. 10, 7:30 p.m.
- Brookside Fall Cleanup
  - Sunday, Nov. 15, 1 p.m.
- Bird Walks, Sundays, 9:00 a.m.
  - Nov. 1, 8, 15, 22, 29

#### December 2015

- General Meeting, Freeport Memorial Library
  - Tuesday, Dec. 8, 7:30 p.m.
- Tackapausha Children’s Holiday Party
  - Saturday, Dec. 12, 1 p.m.
- Bird Walks, Sundays, 9:00 a.m.
  - Dec. 6, 13, 20

#### January 2016

- General Meeting, Freeport Memorial Library
  - Members’ Night
  - Tuesday, Jan. 12, 7:30 p.m.
- Bird Walks, Sundays, 9:00 a.m.
  - Jan. 3, 10, 17, 24, 31

#### February 2016

- General Meeting, Freeport Memorial Library
  - Tuesday, Feb. 9, 7:30 p.m.
- Bird Walks, Sundays, 9:00 a.m.
  - Feb. 7, 14, 21, 28

#### March 2016

- General Meeting, Freeport Memorial Library
  - Tuesday, March 8, 7:30 p.m.
- Bird Walks, Sundays, 9:00 a.m.
  - March 6, 13, 20

#### April 2016

- General Meeting, Freeport Memorial Library
  - Tuesday, April 12, 7:30 p.m.
- Bird Walks, Sundays, 9:00 a.m.
  - April 3, 10, 17, 24
- Brookside Preserve Cleanup (TBA)

#### May 2016

- Central Park Bird Walk
  - Saturday, May 7
- General Meeting, Freeport Memorial Library
  - Tuesday, May 12, 7:30 p.m.
- Bird Walks, Sundays, 9:00 a.m.
  - May 1, 15, 22, 29

#### June 2016

- Annual Dinner
  - Wednesday, June 15
- Bird Walks, Sundays, 9:00 a.m.
  - June 5, 12

### THE PAPER VS. PLASTIC BAG DEBATE

**Editor’s note:** The following question and answer come from the NYS Department of Environmental Conservation’s collection of “Myth Busters,” which is archived at [www.dec.ny.gov/public/45772.html](http://www.dec.ny.gov/public/45772.html). This one was published back in 2008.

**Q:** A paper bag is a more environmentally conscious choice than a plastic bag, right?

**A:** Neither paper nor plastic is your best choice.

To accurately compare paper and plastic bags requires a look at the life-cycle environmental costs of each. Life-cycle costing considers a product’s use of resources and energy and environmental impact during the extraction of the raw materials, transport, manufacture, use, and disposal.

Paper bags are made from trees (a renewable resource) and are biodegradable. However, they take four times as much energy to produce as does a plastic bag. Making pulp for paper requires the use of toxic chemicals and large quantities of water. Paper bags are heavier and bulkier, requiring more trucks to transport than plastic bags.

Plastic bags are a non-renewable, petroleum-based product and never degrade. We use one million plastic bags a minute! Very few are recycled and thousands end up in the ocean — killing marine wildlife. On the plus side, they take 91% less energy to recycle.

Your best option is to get some sturdy, reusable bags and keep a supply handy.

**BOOKS FOR BIRDERS**

*R. U. Abydar II with Sy Schiff*

You ask, “Why do we feed birds?” Because... we do it for the birds; in winter they can use our help. But... we also do it for ourselves! Many of us long for some contact, however brief, with nature. Our gifts of birdseed and hospitality towards these birds make us happy as well. Well, which is it? Or is it a little of both?

This month’s book is *Feeding Wild Birds in America: Culture, Commerce, and Conservation* by Paul J. Baicich, Margaret A. Barker, and Carrol L. Henderson. Today, feeding birds is big business as well as a popular pastime. It hasn’t always been that way. This book tells...
the complete (?) story of bird feeding from the late 1800s to the present day. It is chock full of fascinating details about early advocates and the development of seeds, seed mixtures, and the variety of styles in bird feeders — platform, tube, suet, and hopper.

The authors also note how bird preservation attempts were promoted and eventually came about. This movement also came alongside the increasing opposition to the hunting and slaughter of birds for fashion, sport, and art. Just think how many birds our own John James Audubon had to shoot in order to create the “perfect” pose for his paintings of his fabulous birds!

The book is organized in two ways: first, a continuing historical narrative, a decade at a time, showing the growth of the bird feeding industry; and second, a series of complementary essays on a variety of related topics. These essays are interspersed throughout the book and act as a brief break from the main theme.

Homeowners and sportsmen had, unwittingly, worked together in putting bread crumbs out for the birds. This interrelationship had always coexisted but had not been well documented. Seed companies saw a commercial need and the authors describe efforts to experiment with the development of birdseed mixtures and related products. A major industry was born!

While the basic subject matter might seem to be, to the uninitiated, less than exciting, the descriptions of ingenuity of these manufacturers of bird food feeders to make their products attractive to the birders merits some attention here. At last, seed growers and distributors were developing the mixtures that were going into the feeders that has become a billion dollar industry! Backyard bird feeding is, by far, the most popular form of bird-watching. This information-packed book is your bridge to the history of this thoroughly enjoyable pastime. Replacing once-wild habitat one backyard at a time is the powerful urge within our birding passion. This well-researched book’s significant lesson is how America’s love of nature spawned a new mega-industry. Read it — and, if you haven’t done so already, create that backyard bird feeding haven for our avian friends.

**BROOKSIDE PRESERVE CLEANUP SCHEDULED**

On **Sunday, November 15**, starting at **1 p.m.**, SSAS will have its fall cleanup at Brookside Preserve, rain or shine. Brookside is a 20-acre freshwater wetland, woodland, and upland area owned by Nassau County that is managed by SSAS. PDF files of our trail guide and children’s freshwater wetland guide can be downloaded from ssaudubon.org. The Preserve is located on the Freeport–Baldwin border, along Milburn Creek; park at the main entrance on Brookside Avenue just north of Sunrise Highway (turn north at the traffic light that’s just east of Freeport High School). Please bring work gloves and spend an hour or two with us.

**ENVIRONMENTAL QUOTATIONS**

*Michael Spelling*

From A Dictionary of Environmental Quotations, compiled by Barbara K. Rodes and Rice Odell (published by Simon & Schuster, copyright © 1992):

“Because butterflies are both so conspicuous and so fragile, the size and well-being of their populations serve as excellent monitors of environmental change and of rises in pollution levels.” — Robert M. Pyle [lepidopterist], quoted in *New York Times*, 2 March 1975

---

**WELCOME NEW MEMBERS**

**Wendy Murbach**

One of the wonderful perks that you get from an Audubon membership is the chance to be a part of your local Audubon chapter, South Shore Audubon Society.

You are automatically a valued member of this active and friendly chapter, so please come out to the next meeting at the Freeport Memorial Library from **7:30–9:30 p.m.** on the second Tuesday of the month to hear what you can do to help preserve your local environment’s health and viability, to hear about local issues that you can help to solve, and to see an interesting program.

You are warmly invited to be an active participant in this vibrant all-volunteer organization comprised of persons who, like you, care about the earth we live on, about our local environment, and about the creatures that live alongside us.

Our new members this month (as Audubon transitions between companies providing membership services) are:

Baldwin ....................... Meta J. Mereday
Elmont ...................... Catherine Johnson
Farmingdale ............... Mary Looney
Floral Park ................. Stephen Marcus
Lynbrook ........................ Mark Gold
Massapequa ................ Marie Sheehan
Rockville Centre .......... Mrs. William H. Frederick, Jr.

**NAT’L AUDUBON MEMBERSHIP STATUS** (844) 428-3826
SSAS BACKYARD BIRD SURVEY

For several years, SSAS’s Research Committee has been conducting a study to document the bird species found in the SSAS area and to estimate their numbers. We greatly appreciate input from anyone that feeds and/or observes birds in their yard or neighborhood.

To participate, simply record the birds that you see in your yard, neighborhood, or at your feeder; the date, time, and the number or approximate number of each species; and fill in the table provided below. If you have more recordings than lines in the table, please attach an additional piece of paper to the table and submit the additional recordings in the same manner. At the end of each month, please mail or e-mail your record to me at the appropriate address listed below, or hand it to me at our monthly meeting. Additional survey sheets are available at SSAS events.

Please do not hesitate to submit your observations, even if you have been able to make only very few. WE NEED YOUR INPUT! **Town of Hempstead residents who feed birds should contact the Town about its ordinance.**
